

To install for CINEMA4D

Notice: For very old versions use the folder C4D_oldversion.

To load the plants in the content browser copy the data in the user directory. The path to the user directory: Um die Pflanzen in den Contentbrowser zu laden, kopieren Sie einfach die Dateien in das Benutzerverzeichnis. Der Pfad zum Benutzerverzeichnis ist zu finden unter:

„Preferences“
„Common“
„Library“
„Browser“ (couldn't you find the folder "Browser" please create a new one)

To install for CINEMA4D (older versions)

Notice: For very old versions use the folder C4D_oldversion.

- Copy the TEX folder from the CD to your hard drive.
- Copy tree_season.cob from the CD's Plugins folder to your CINEMA 4D Plugins folder.
- Launch CINEMA 4D and point a search path to the TEX folder (General Preferences)

To use

Simply import the desired objects using File > Load Object from the Object Manager.

The imported objects will appear at the world origin.

Each tree and bush is available in two levels of detail. Standard_resolution uses a moderate number of polygons and is suitable for most situations.

High_resolution uses a high number of polygons for enhanced detail. These models will take longer to render and will consume more memory than the Standard_resolution models.

Use the lowest level that meets your needs, otherwise the scene will be slower to navigate and will take longer to render than is necessary.

Each flower comes in three levels of detail: level 1, level 2 and level 3.

Level 1 contains the lowest number of flowers, level 3 the highest.

To create a background, simply scale up small objects.

The VB Tree Season plugin (EXTERIORS Vol. 1 only)

This plugin, called from the Plugins menu, lets you switch between seasons at the click of a mouse button. Some plant types (flowers in particular) will disappear in winter.

Rendering

Set the Ray Depth and Shadow Depth values in the Options dialog of the Render Settings to 20 or for winter images to 50. These settings should ensure good results although you may wish to try lower values for faster rendering.
